SOFTWARE ENGINEERING LAB REPORT

Lab 2: Agile Backlog Creation & Sprint Simulation in Jira

Project : Hostel Maintenance & Issue Ticketing System

Name : Kuber Vijayakar

SRN : PES1UG24CS671

Epics Created

Epic	Epic Name	Purpose
SCRUM-5	Maintenance Ticket Management	Handling and submitting maintenance issues.
SCRUM-6	Maintenance Dispatch & Work Management	Reviewing tickets, assigning staff and starting maintenance work.
SCRUM-7	SLA Monitoring & Escalation	Monitoring SLA timers and triggering escalation.
SCRUM-8	Resolution Verification & Closure	Verifying completed maintenance and closing the ticket.

User Stories and Story Points

The backlog shows 10 user stories. Story points were assigned using the Fibonacci-style estimation values as instructed in the lab manual.

Issue	User Story	Epic	Story Points
SCRUM-10	Enter Maintenance Issue Details	Maintenance Ticket Management	3
SCRUM-11	Attach Issue Photo	Maintenance Ticket Management	2
SCRUM-12	Submit Maintenance Ticket	Maintenance Ticket Management	3
SCRUM-13	Review Maintenance Tickets	Maintenance Dispatch & Work Management	3
SCRUM-14	Assign Maintenance Staff	Maintenance Dispatch & Work Management	5
SCRUM-15	Start Work with Location Verification	Maintenance Dispatch & Work Management	8
SCRUM-16	Monitor SLA Timers	SLA Monitoring & Escalation	5
SCRUM-17	Trigger SLA Escalation	SLA Monitoring & Escalation	8
SCRUM-18	Verify Completed Maintenance	Resolution Verification & Closure	3
SCRUM-19	Close Ticket with OTP Confirmation	Resolution Verification & Closure	5

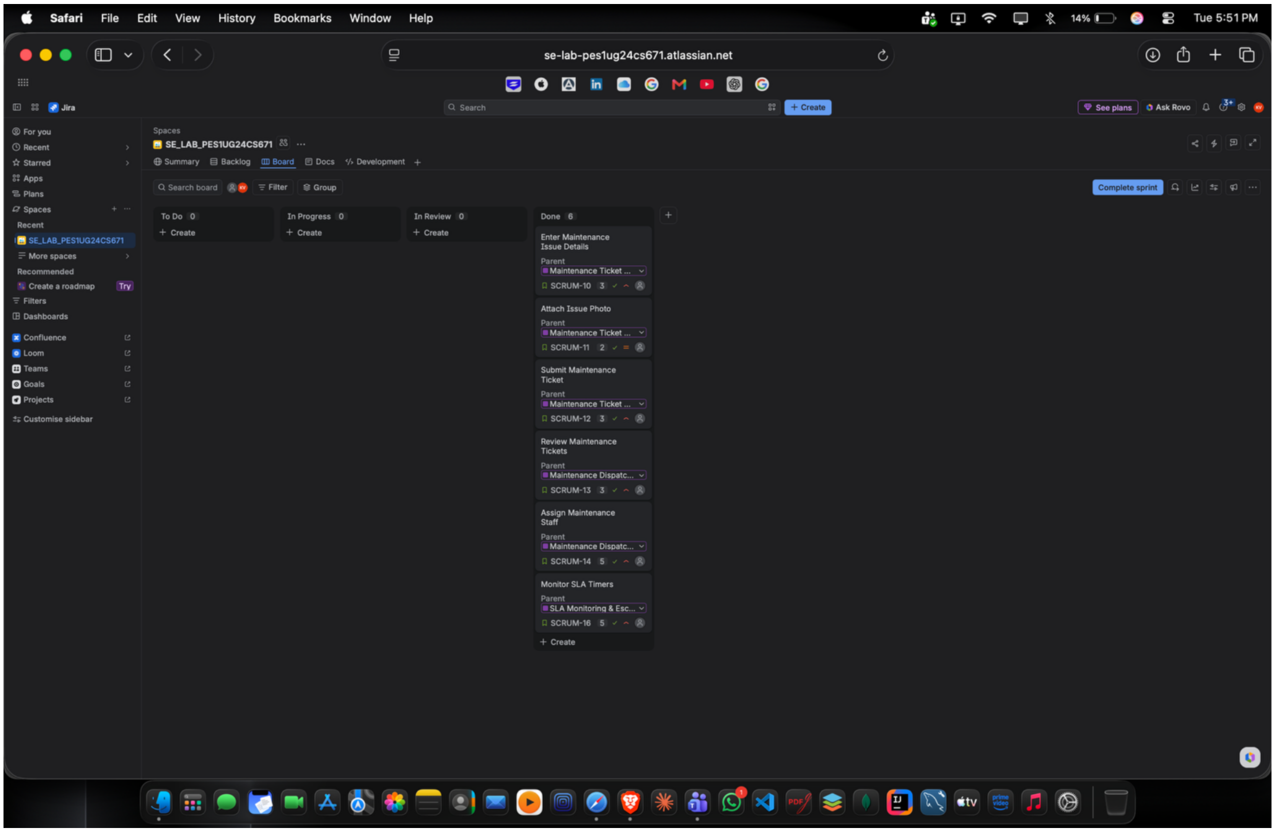

Figure 3: Sprint 1 board after all six stories were moved to Done.

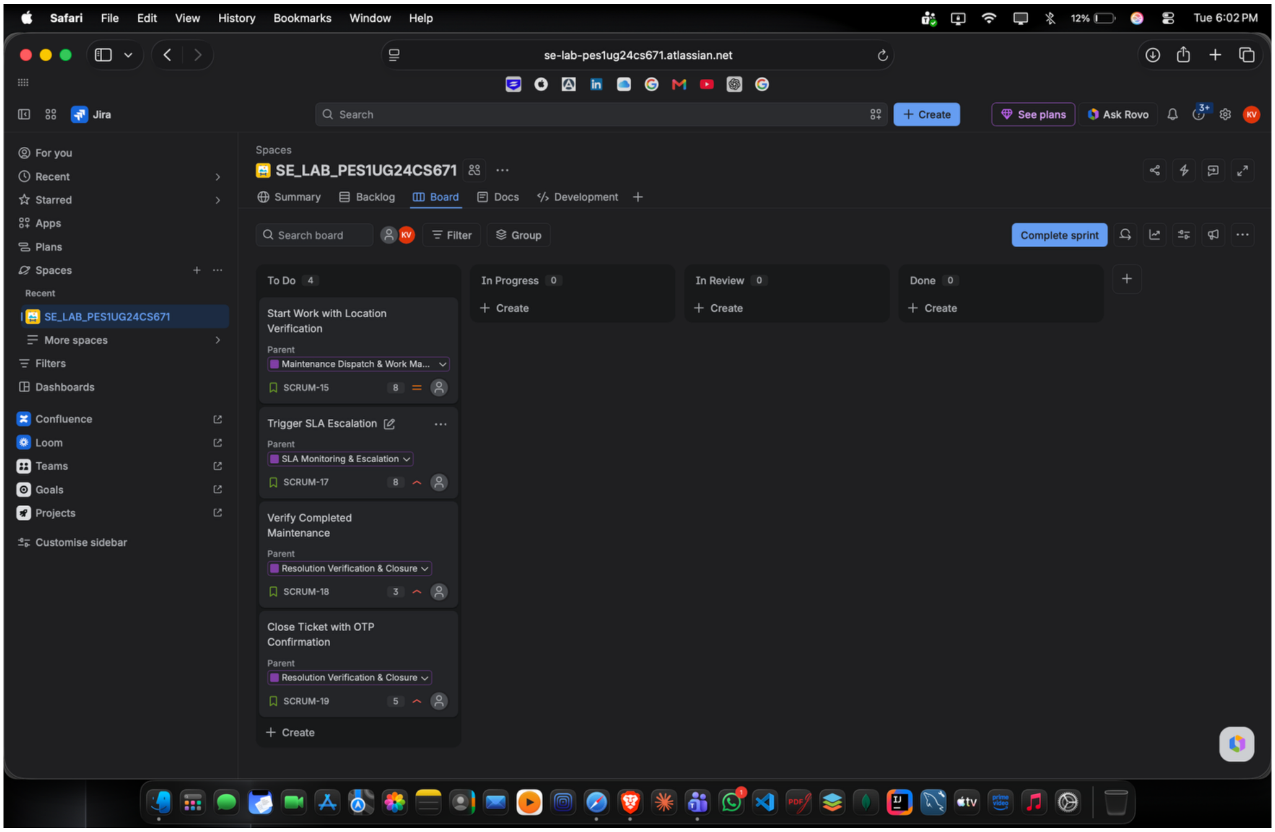

Figure 4: Sprint 2 board showing the four remaining stories.

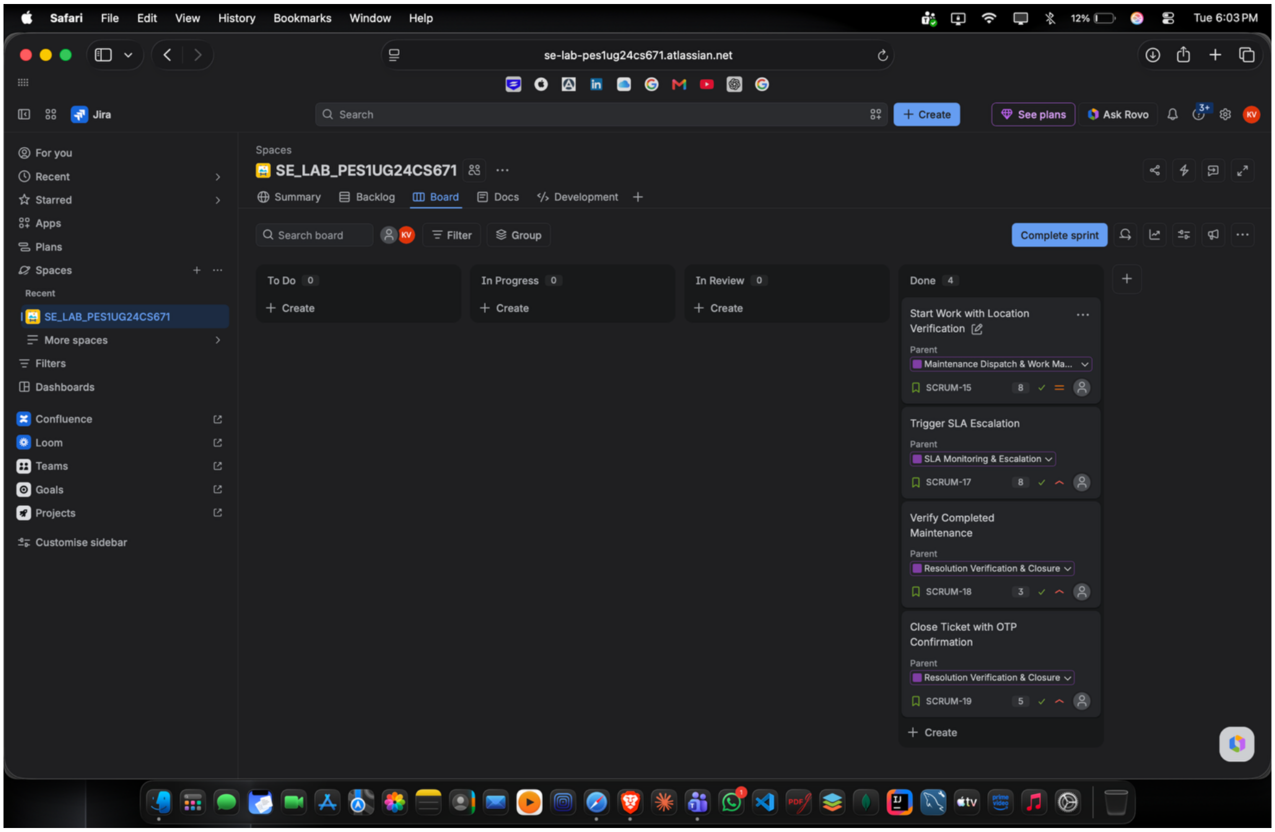

Figure 5: Sprint 2 board after all four stories were completed.

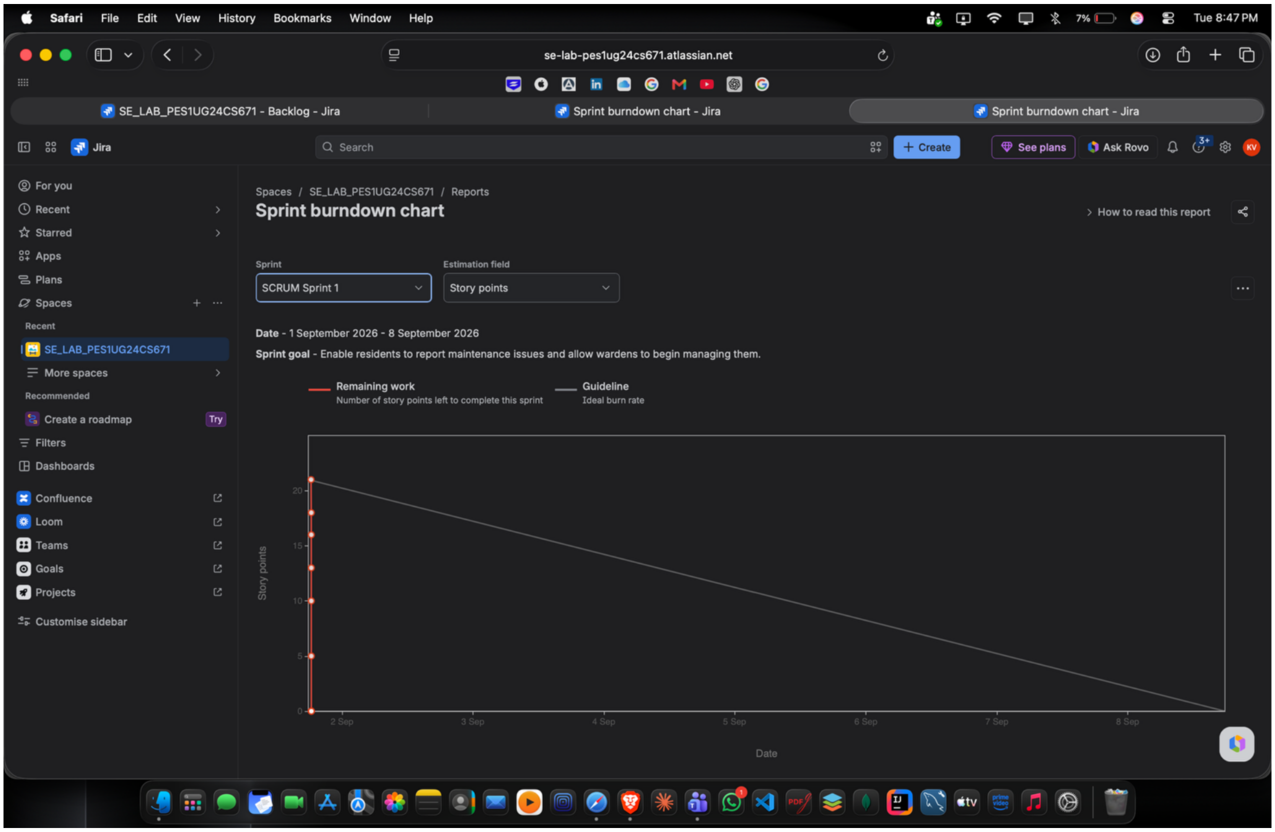

Figure 6: Sprint Burndown Chart for Sprint 1 using Story Points.

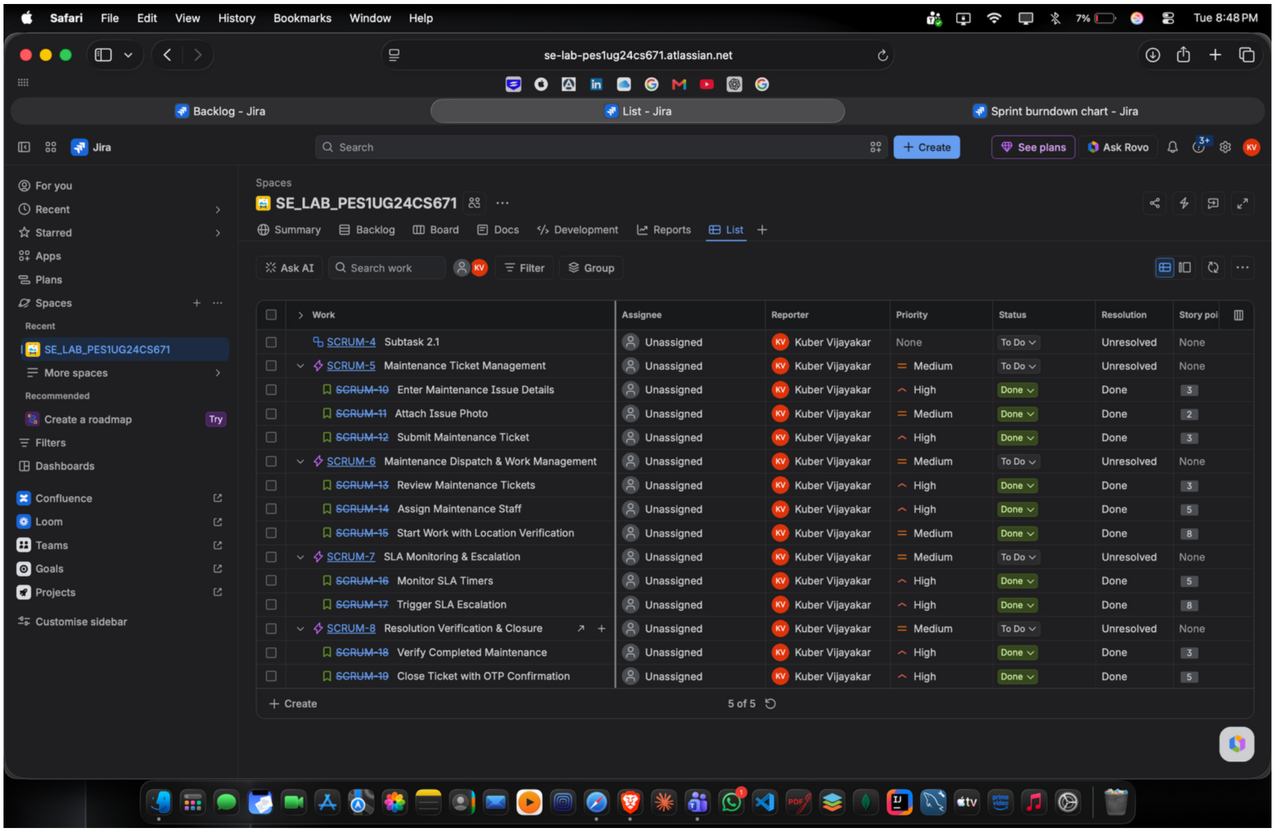

Figure 7: Jira List view showing completed stories, priorities, status, resolution and story points.

Reflection

1. Did your estimations reflect the actual effort?

The story points provided a reasonable relative estimate of the work. Since this was a simulated sprint, the estimates mainly helped compare the effort of different stories.

2. Was your backlog well-prioritized?

Yes. The stories were organized by priority and the higher-priority items were included in the sprint planning.

3. How did your simulated sprint align with your plan?

The planned stories were moved through the Scrum workflow and completed within the simulated sprint. The remaining stories were taken into the second sprint.

4. What insights did the burndown chart give about your team’s capacity?

The chart showed how the remaining story points changed during the sprint and helped indicate whether the planned work could be completed within the sprint period.
